CLIMATOLOGICAL DATA

COLORADO

JANUARY 1951
Volume LVI No. 1

SAN FRANCISCO: 1951

COLORADO - JANUARY 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

Seasonal temperatures with precipitation somewhat exceeding the normal and the absence of unusually severe or damaging storms characterized the month's weather.

From the 1st to the 14th, temperatures fluctuated slightly but averaged near normal with very light and widely scattered precipitation. Temperatures rose from the 15th to the 18th, inclusive, with daily excesses from 15° to 20° over the eastern portion of the State. Following a few days of near average conditions, temperatures again rose considerably above normal with the monthly maximum temperatures being observed at most stations on the 26th. Falling temperatures with daily deficiencies from 25° to 40° and general snows prevailed at the close of the month, during which period monthly minimum temperatures and the greatest portion of the month's precipitation occurred.

The average monthly temperature, 23.6°, was 0.3° above the January normal, with a high of 34.3° at Canon City, and a low of 8.3° at Taylor Park. The monthly maximum of 80° was recorded at Springfield and Two Buttes on the 26th, with a minimum of -35° at Taylor Park on the 7th.

Precipitation averaged 1.10 inches or 0.17 inch above the average for the past 63 years. The greatest monthly amount, 6.79 inches, was recorded at Wolf Creek Pass, while 0.05 inch, the least, occurred at Wray and San Luis Lakes. The average snowfall was 16.5 inches.

Winter grains were more or less dormant but suffered somewhat from blowing snow, moisture deficiency, green bugs, and the Hessian fly. Ranges and pastures continued dry and inadequate. Heavy snow at the end of the month, however, provided beneficial snow cover for planted fields and ranges. Livestock was in very good condition throughout the period with practically all herds and flocks in feed lots. Hay and other feeds have been plentiful throughout the winter. Reports on highways and roads generally were good with some slippery for limited periods in the higher elevations. On the 30th, snow slides resulting from the heavy snowfall temporarily closed the Monarch and Red Mountain highway passes. Subsoil moisture and snow on the ground at the end of the month were both deficient.

MODERATE WIND STORM

During midday on the 3d, winds varying from fresh to gale force prevailed in Denver and vicinity with peak velocities of 43 miles per hour at 1:00 p.m. Some trees were broken and uprooted and several nearby automobiles damaged, with total property losses exceeding $4,000. One person suffered a fractured hip when the wind caught a door at the Telephone Building as she was leaving the structure.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January, 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

FEBRUARY 1951
Volume LVI No. 2

SAN FRANCISCO: 1951

COLORADO - FEBRUARY 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Sub-zero temperatures at all stations on the 1st, ranging from -8° to -60°, exceeded the all-time records at many stations and characterized the month's weather.

February opened clear and cold with minima dropping below zero at all stations. The lowest reading for the State was -60°, occurring at 7:30 a.m. on the 1st at Taylor Park, Gunnison County, and exceeding by 6° the previous record of -54° observed at Pearl on January 7, 1930, Steamboat Springs on January 7, 1913, and Westcliffe on February 10, 1933. Temperatures rose rapidly on the 2d east of the Continental Divide, and by the morning of the 3d were slightly above normal. The cold spell was of longer duration over the western half of the State, continuing below normal until the 8th. Following the cold period, temperatures increased rapidly until the 11th, on which date the monthly maxima for most stations were recorded. On the 12-13th, cloudy and unsettled conditions prevailed with the greater portion of the month's precipitation occurring along and east of the Continental Divide on these dates. Temperature reverses were also pronounced during this period, with an average excess of 20° on the 11th and similar deficiencies on the 13th.

During the latter half of the month, temperatures fluctuated somewhat but were generally slightly above seasonal with practically all precipitation over the extreme west portion occurring in this period.

The monthly mean temperature, 29.3°, was 2.0° above normal. The monthly maximum, 89°, occurred at Eversoll Ranch, Baca County, on the 11th, and the monthly minimum temperature, -60°, at Taylor Park on the 1st, resulting in a monthly range of 149°.

Precipitation was 70% of normal, with an average for the State as a whole of 0.71 inch. All sections except the Kansas River basin showed precipitation deficiencies. Climax reported 3.93 inches, the greatest amount, with John Martin Dam and Bloom showing only a trace. The greatest fall in any 24-hour period was 0.95 inch at Rangely on the 28th. Due to heavy accumulation of snow over the higher elevations, snowslides and avalanches were frequent during the first decade at several of the mountain passes, delaying traffic and resulting in some damage to transmission lines and highways.

Conditions were favorable for plowing and soil preparation at the lower levels. Winter grains continued to suffer from lack of moisture, and the crop outlook at the close of the month was only fair. Livestock wintered well and only slight shrinkage resulted from the short periods of low temperatures. Calving and lambing were well under way with promising increases.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January, 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

MARCH 1951
Volume LVI No. 3

SAN FRANCISCO: 1951

COLORADO - MARCH 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

March was noticeably below normal in both temperature and precipitation with the greater temperature deficiencies in the Kansas and North Platte River basins. The Platte drainage area received the greater amount of moisture, or about 73% of the seasonal average. The Kansas Basin was the driest, with only 18% of normal.

Precipitation for the State as a whole was 0.65 inch, or 0.72 inch below the average for the past 64 years. The greatest monthly amount, 4.31 inches, occurred at La Veta Pass, and no moisture was recorded at Wray, Grover and Kauffman. The maximum 24-hour amount was 1.40 inch at La Veta Pass on the 17th.

The monthly mean temperature, 32.9°, was 1.5° below the 64-year average. The highest mean was 44.1° at Eversoll Ranch, Baca County, while Taylor Park showed a low mean of 17.3°. Eversoll Ranch and Taylor Park also recorded the monthly temperature extremes of 83° on the 22d, and -30° on the 1st, respectively.

Temperature fluctuations were frequent but moderate. Periods of abnormal temperatures occurred from the 5th to the 7th, inclusive, near mid-month, and again from the 21st to the 26th, with intervening periods of corresponding deficient temperatures.

Precipitation distribution was irregular with generally light rain or snow showers near the beginning of the period and again near its close over the entire State, with somewhat heavier precipitation over the higher elevations and east of the Continental Divide during the second decade. Except for strong winds causing some soil erosion in the eastern counties, no severe or otherwise damaging storms were reported throughout the month.

Due to the prolonged period of subnormal precipitation over the greater portion of the State, conditions were unfavorable for winter grains, ranges, plowing and farming activities in general. However, by the close of the month, planting of spring grains, sugar beets and other row crops was well under way with some fields showing. Livestock wintered well with calving, lambing and shearing general in most sections.

Highways and roads generally were in good condition with transportation slowed only for short periods due to ice conditions and snowslides in the higher elevations and mountain passes.

The outlook for subsoil moisture, irrigation and storage water was good in the North Platte drainage basin, but only poor to fair elsewhere.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January, 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

- No record in Table 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.

+ And also on a later date or dates.

* Amounts included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

6 Station not equipped with a recording gage.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.

R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.

S Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks, postal notes and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

APRIL 1951
Volume LVI No. 4

SAN FRANCISCO: 1951

COLORADO - APRIL 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Temperatures for the month showed a marked deficiency over the State with the exception of the Arkansas basin which showed an excess during the last two weeks. Minima dropped to below freezing throughout the month in most sections, causing heavy damage to fruits and vegetation in the Colorado and Gunnison River valleys.

Precipitation was normal and above the first half of the month, bringing some needed relief to ranges and crops. During the last half of the month, precipitation was near normal north and deficient south with some stations in the southwest portion receiving very little or none. Except for strong winds causing some soil erosion, and freezing temperatures which damaged fruits, no severe storms occurred.

Precipitation for the State as a whole was 1.49 inches, or 0.25 inch below the average for the past 64 years. The greatest monthly amount, 7.02 inches, occurred at Independence Pass, and the least, 0.05 inch, at Fountain 9 NE. The maximum 24-hour amount was 2.40 inches at La Veta Pass on the 10th.

The monthly mean temperature, 42.2°, was 1.7° below the 64-year average. The highest mean was 53.8° at Palisade 1 S,and the lowest was 24.4° at Sugar Loaf Reservoir, Lake County. The highest temperature recorded was 92° at Eversoll Ranch, Baca County, and at Holly on the 28th, and the lowest, -15°, occurred at Westcliffe on the 11th.

Subnormal temperatures, inadequate sunshine, and insects were detrimental to grains throughout the month, although limited improvement was reported in areas of increased moisture by the end of the period. Planting of spring grains, sugar beets and garden truck was general, but germination was slow due to subnormal temperatures. The outlook for fruits was good except in the areas affected by spring frosts and low winter temperatures. Livestock were in good condition with some movement to summer ranges. Pastures and ranges were somewhat improved but additional moisture was needed, especially in the extreme southeast portion.

The outlook for subsoil moisture and irrigation storage water was good in the Platte River basin, but poor elsewhere, with only a slight improvement noted.

DKW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January, 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

- No record in Table 3, 4, 6,7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.

+ And also on a later date or dates.

* Amounts included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

6 Station not equipped with a recording gage.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.

R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.

S Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

MAY 1951
Volume LVI No. 5

SAN FRANCISCO: 1951

COLORADO - MAY 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

The cool, dry trend of the latter part of April continued into the first two weeks of May, but a turn to warmer, more moist conditions the latter half of the month resulted in slightly above normal temperature and precipitation, with the State averages of 53.5° and 1.83 inches representing excesses of 0.9° and 0.08 inch. The above normal rainfall in the eastern counties masked to some extent the drier conditions over western and central Colorado, but sufficient moisture was received to offset previous deficiencies except in the San Luis Valley where Alamosa received only 0.03 inch during the entire month.

Thunderstorms during the early morning of the 15th brought heavy rains to southeastern Colorado. Baca County was particularly hard hit where Harmon Ranch reported 7.13 inches during the storm. Two Buttes had the greatest amount for the month with 8.18 inches.

The seasonal temperature trend continued upward with the lowest temperatures recorded generally on the 2d and 3d. Platoro Dam's 4.0° on the 2d was the lowest for the State. May 28 was the hottest day with temperatures in the high 90's quite general in the southeastern counties. Rocky Ford topped all other stations with 99° on that day.

The general increase in moisture and warmer temperatures were beneficial to all phases of agriculture, and by the close of the month much of the previous retardation had been overcome. Subsoil moisture and irrigation water, while not too plentiful, were considerably improved. Winter wheat and barley were beginning to head and some early spring grains were stooling. Pastures and ranges were adequate and most livestock was reported in good condition and on summer ranges.

The early month cold delayed growth of corn, potatoes and garden truck, but by the end of the month these crops were making progress at a normal rate. An excellent stand of sugar beets was reported.

While fruits in general were fair to good in most sections of the State, low winter temperatures and heavy spring frosts left their mark in some areas of the Colorado and Gunnison Valleys.

Some sections of the eastern counties experienced hail damage on the 14-15th, 20-21st, and 29th, with total estimated crop damage of $750,000. The moisture contained in these storms was beneficial, however, to the extent that losses appeared to be largely offset by increased yields.

SEVERE STORMS

A squall line developing over southeastern Colorado during the night of the 14-15th was accompanied by a series of severe thunderstorms in Baca, Prowers, Bent, and eastern Las Animas and Otero Counties. Heavy rains of 4.00 to 7.00 inches with locally severe hail and high winds caused crop losses of some $350,000. Even greater damage was caused by flooding, particularly in the town of Holly where the business district was inundated with two to three feet of water when Wildhorse Creek overflowed its banks. There was one death by drowning.

On the afternoon of May 20, a severe thunderstorm with heavy rains and high winds traveled in a path 14 miles wide from a point north of Julesburg 15 miles eastward to Big Springs, Nebraska. Several small tornadoes were reported with some damage to fences and small buildings. Flooding in Julesburg filled many basements and the heavy rains washed some roads and fields.

Kit Carson, Cheyenne and Lincoln Counties experienced some hailstorms of moderate to heavy intensity during the afternoon and evening of May 29 when a rapidly moving cold front swept across the State. Damage to winter wheat amounted to an estimated $85,000 while property losses, confined largely to glass and automobiles, totaled $50,000.

SUPPLEMENTARY PRECIPITATION DATA

For the Period May 14 to 15,1951

STATION	LOCATION	TIME: BEGINNING AND ENDING	TYPE OF EQUIPMENT USED	EXPOSURE	TOTAL
BRISTOL	Lat. 38°08' Long. 102°18'	P.M. 14th to A.M. 15th	Victor rain gage	Good	2.8
CAMPO	Sec. 2, Twp. 3, R.47	P.M. 14th to A.M. 15th	Standard 8" rain gage	Good	5.0
GRANADA	Lat. 38°04' Long. 102°19'	7:45 P.M. 14th to 8 A.M. 15th	8" opening Friez recording rain gage, 12" D. Traverse gage	Good	3.4
GRANADA	Sec. 1, Twp. 24, R.44	P.M. 14th to A.M. 15th	Glass rain gage 3/4" x 5-1/2"	Good	4.5
HARTMAN	Sec. 23, Twp. 22 S, R.43 W	P.M. 14th to A.M. 15th	Glass rain gage 3/4" x 5-1/2"	Good	3.8
HOLLY	Sec. 36, Twp. 22, R.42	7:15 P.M. 14th to 6:40 A.M.15th	Glass rain gage 3/4" x 5-1/2"	Good	4.5
HOLLY	Sec. 10, Twp. 24, R.42	P.M. 14th to A.M. 15th	Tin can 4-1/4" x 6-3/4" securely mounted	Good	4.6
HOLLY	Sec. 24, Twp. 25 S, R.42	P.M. 14th to A.M. 15th	Glass rain gage 3/4" x 5-1/2"	Good	5.5
LAMAR	Sec. 31, Twp. 22, R.45	P.M. 14th to A.M. 15th	Glass rain gage 3/4" x 5-1/2"	Good	2.5
LAMAR	Sec. 18, Twp. 22, R.45	P.M. 14th to A.M. 15th	Straight can approx. 2-3/4" in diameter and 5-1/2" deep anchored well on top of post	Good	2.5
PRITCHITT	Lat. 37°22' Long. 102°50' (Santa Fe Depot)	9:30 P.M. 14th to 7:30 A.M.15th	Glass rain gage 3/4" x 5-1/2"	Good	#6.2
SPRINGFIELD	Sec. 17, Twp. 33, R.47	P.M. 14th to A.M. 15th	Standard 8" rain gage formerly SCS	Good	3.5
SPRINGFIELD	Sec. 6, Twp. 29, R.47	P.M. 14th to A.M. 15th	Half bushel measure 9" deep	Good	9.0
SPRINGFIELD	Lat. 37°29' Long. 102°41'	5:30 P.M. 14th to 8:30 A.M.15th	WB Standard 8" rain gage	Good	7.1
SPRINGFIELD	Lat. 37°19' Long. 102°43'	5 P.M. 14th to 6 P.M. 14th - DN 15th to 8 A.M. 15th	WB Standard 8" rain gage	Good	4.7
SPRINGFIELD	Lat. 37°24' Long. 102°36'	7 P.M. 14th to 7:30 A.M. 15th	WB Standard 8" rain gage	Good	5.4
SPRINGFIELD	Sec. 5, Twp. 29 S, R.46 W	P.M. 14th to A.M. 15th	Standard 8" rain gage	Good	7.0
TWO BUTTES	Sec. 34, Twp. 25 S, R.44 W	P.M. 14th to A.M. 15th	Glass rain gage 3/4" x 5-1/2"	Good	5.5
TWO BUTTES	Sec. 32, Twp. 26, R.44	P.M. 14th to A.M. 15th	Galvanized small tank with straight sides and flat bottom, 20" in diameter, 14" deep	Good	8.0
TWO BUTTES	Sec. 29, Twp. 27, R.44	P.M. 14th to A.M. 15th	Standard 8" rain gage	Good	6.4
TWO BUTTES	Sec. 30, Twp. 28 S, R.44 W	7 P.M. 14th to 6 A.M. 15th	Standard 8" rain gage	Good	6.6
TWO BUTTES	Lat. 37°38' Long. 102°31'	P.M. 14th to A.M. 15th	Standard 8" rain gage	Good	5.7
UTLEYVILLE	Lat. 37°16' Long. 103°02'	10 P.M. 14th to 6 A.M. 15th	Standard 8" rain gage	Good	3.2
WALSH	Sec. 22, Twp. 31, R.44	P.M. 14th to A.M. 15th	1" diameter x 5-3/4" deep glass rain gage	Good	3.2
WALSH	Lat. 37°23' Long. 102°17'	P.M. 14th to A.M. 15th	Standard 8" rain gage	Good	2.0

# Gage emptied during storm. Other supplemental data for this storm will appear in May CD for Texas, Oklahoma and Kansas.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

- No record in Table 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.

+ And also on a later date or dates.

* Amounts included in following measurement, time distribution unknown.

// Gage is equipped with a windshield.

6 Station not equipped with a recording gage.

AR This entry in time of observation column in Station Index means after rain.

B Adjusted to a full month.

E Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.

M One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.

R Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.

S Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.

SS This entry in time of observation column in Station Index means sunset.

T Trace, an amount too small to measure.

V Includes total for previous month.

VAR This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

THIS ISSUE CONTAINS ADDITIONAL PRECIPITATION DATA FOR THE STORM OF MAY 14-15, 1951 ON PAGE 87.

COLORADO

JUNE 1951
Volume LVI No. 6

SAN FRANCISCO: 1951

COLORADO - JUNE 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was comparatively cool and somewhat wetter than normal for the State as a whole. All sections showed subnormal temperatures while precipitation was deficient in the Colorado and Rio Grande River Valleys but considerably above normal elsewhere.

June opened unusually cool and temperatures remained below normal until the 12th. During mid-month, temperatures rose to somewhat above seasonal and fluctuated from slightly above to slightly below normal for the remainder of the month. Showers and thunderstorms were frequent and well distributed, especially over the central and eastern areas, and the number of rainy days exceeded the average. Rains over the extreme west and southwest portions were light and widely scattered.

The monthly mean temperature, 58.2°, was 3.3° below the average for the past 64 years, and the sixth lowest of record. An extreme high temperature of 98° occurred at Las Animas on the 17th, Pueblo on the 25th, and Fruita on the 29th. A minimum of 18° was observed on the 3rd at Lake Moraine and Fraser, on the 4th at Pagosa Springs and Dillon, and on the 5th at Hermit.

Precipitation averaged 1.75 inches, or 0.30 inch above the 64 year normal. The greatest monthly amount, 7.11 inches, occurred at Arapahoe, while seven stations, all in the southwest portion, were entirely without moisture.

Conditions were only fair for farming activities. Low temperatures and cloudy skies retarded plant growth in the areas of greater precipitation, while vegetation suffered severely from near-drouth conditions in the drier sections. At the close of the month, grains were fair to good, row crops were good, ranges and pastures were good in the higher elevations and east, but poor to fair in the southwest and extreme west sections.

SEVERE STORM

On the 6th, near Karval, a moderate tornado accompanied by hail damaged farm buildings and crops to the extent of $9,500.

In southwest Crowley and northern Otero Counties, a severe hailstorm and local floods on the 14th resulted in damage to property and crops to the extent of $1,000,000. Also on the 14th in northwestern El Paso County, a twister, or light tornado, caused limited damage of approximately $3,000 to farm buildings.

On the 18th, in the Cheraw-Sugar City areas, a moderate tornado and severe hailstorm damaged crops and some farm buildings to the extent of $110,000.

In extreme southwestern Yuma County on the 21st, three separate hailstorms moving from the northwest to the southeast were observed at approximately 2:30 p.m., 5:00 p.m., and 8:45 p.m. Hailstones ranged in size from marbles to baseballs and accumulated on the ground to a depth of from 8 to 12 inches. A large number of domestic and wild fowl were killed, farm stock were severely bruised and crops ruined. Accurate estimate of losses were not available but were expected to reach several hundred thousands of dollars.

On the 25th, a tornado caused $35,000 damage to crops and farm buildings in a small area 16 miles north of Holyoke, and a hailstorm near Sedgwick resulted in losses of $77,000 to crops, buildings and poultry.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief, U.S. Weather Bureau, Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CORRECTED DATA

NOVEMBER 1950	Table 2, Colorado Drainage Basin, division precipitation departure should be .07.
JANUARY 1951	Denver WB City, temperature departure should be -1.9° and precipitation departure from normal .27.
MARCH 1951	Aspen, hourly precipitation on 5th should be no record from 1 a.m. to 6 p.m.
MAY 1951	Evergreen 2 SW, delete no record hourly precipitation on 31st. Add accumulation on 31st, 7 p.m. through Midnight. Daily and monthly totals should be accumulated (*). Walsenbury, add precipitation on 24th, .06, monthly total should be 2.59, departure .64 and days with .01 or more 11. Recording gage record add hourly precipitation on 24th, 1 p.m., .04; 2 p.m., .02; daily total .06 and monthly total 2.72.

COLORADO

JULY 1951
Volume LVI No. 7

SAN FRANCISCO: 1951

COLORADO - JULY 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

Near-normal temperatures and a deficiency of precipitation featured the month's weather.

The month opened clear and cool with the lowest temperatures in most sections occurring on the 1st. From the 3d through the remainder of the first decade, skies were clear and temperatures rose to considerably above the average. From the 10th to the 13th, it was considerably cooler with general showers and thunderstorms over the eastern plains and the Rocky Mountain region. From the 14th to the close of the month, temperatures fluctuated somewhat and precipitation was more or less general with the greater daily amounts occurring during this period.

The monthly mean temperature, 68.9°, was 1.5° above the normal. All sections except the Kansas River Basin showed excesses. The highest temperature, 107°, occurred at La Junta CAA AP on the 20th, and the lowest, 25°, was recorded at Grand Lake 1 N on the 1st.

Precipitation averaged 1.41 inches, or 70% of the July normal, and was deficient in all sections except the Kansas River Basin. The greatest monthly value, 7.39 inches, occurred at the Burlington 12 NNE station, and no moisture was recorded at Manassa. The greatest precipitation in any 24-hour period was 3.20 inches at Bloom on the 22d.

Conditions generally were fair to good for farming activities. Crops as a whole were subnormal due to current and previous periods of deficient moisture. Combining and thrashing of winter grains were well advanced at the close of the month. Spring grains were ripening and harvesting of the more advanced fields had begun. Row crops made satisfactory progress, especially in the irrigated areas, with the sugar beet crop the most outstanding. Alfalfa, other forage, pastures and ranges made poor showing. Livestock, however, continued in good to excellent condition. Picking of cherries, apricots and early apples was general with a very light yield reported.

SEVERE STORMS

A hail and rain storm in southeastern Weld county on the 16th, resulted in losses to property and crops to the extent of $70,000.

Hail damage to crops of $45,000 occurred near Bovina on the 20th.

Heavy rain and hail on the 21st in the mountainous area south of Carbondale caused numerous landslides and delayed traffic temporarily.

In north Lincoln and western Kit Carson counties, heavy hail, accompanied by strong winds, damaged farm buildings to the extent of $10,000 and caused crop losses of $95,000.

Lightning on the 20th injured a man and his son at Paonia, and killed one man near Walden on the 27th.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

AUGUST 1951
Volume LVI No. 8

SAN FRANCISCO: 1951

COLORADO - AUGUST 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

Seasonal temperatures, somewhat above average number of days cloudy and days with precipitation, abnormal rainfall with many sudden and destructive downpours, together with damaging hail and lightning storms characterized the month's weather.

Temperature fluctuations were moderate and there were no unusual departures. The Arkansas and Colorado River basins showed slight excesses, while corresponding deficiencies occurred in the remainder of the State.

Precipitation was well distributed throughout the month with all sections except the Kansas River drainage basin showing considerable excess, especially the Platte River basin which showed a departure from normal of nearly 80%.

The average monthly temperature, 66.1°, was 0.2° above normal. The highest station mean of 77.3° occurred at La Junta CAA AP, and the lowest, 51.9°, at Platoro Dam. Eversoll Ranch, Baca County, observed the monthly maximum of 104° on the 6th, while 21°, the monthly minimum, was registered at Fraser on the 15th.

Precipitation averaged 2.41 inches with an excess of 0.50 inch. Boulder 2, in the Platte River basin, received the greatest amount of moisture, 8.59 inches, while Olathe, Montrose County, recorded only 0.34 inch. The greatest fall in any 24-hour period was 4.65 inches, also at the Boulder 2 station on the 3rd.

The increased moisture was beneficial to crops, ranges and pastures, and also improved subsoil moisture and water supply for irrigation and domestic use. With seasonal temperatures and abnormal precipitation, the crop outlook showed the greatest improvement of the current season. Combining and thrashing of winter wheat and barley were completed early in the month, and by the close of the period harvesting of spring grains was well advanced. The over-all grain crop was only fair. Row crops and garden truck, especially corn and potatoes, made satisfactory progress, and movement to market increased as the month advanced. Reports on sugar beets were the best in years, and the crop outlook is excellent. Pastures and ranges improved somewhat but continued inadequate in most of the southern and western sections of the State. With some feeding in the drier areas, livestock continued in very good condition. The berry, cherry and apricot crop was light with a similar outlook for pears, peaches and apples.

SEVERE STORMS

One of the severest rain storms in the station's history occurred in the Denver metropolitan area from 3:00 p.m. of the 2nd until 8:00 a.m. of the 3rd. Cherry Creek ran bank-full and many small streams overflowed and flooded adjoining areas. Local transportation was halted temporarily. Shops, homes and basements were inundated and hundreds of persons stranded. Loss of property and crops exceeded $500,000.

A heavy downpour south of Ouray caused high water through the town, resulting in $30,000 damages to lawns, trees, buildings and roads on the 3rd.

On the night of the 3rd and 4th, heavy rainfall caused raging flash floods along 50 miles of the front range of mountains from Boulder to Fort Collins, causing a break of 40 feet in the Buckhorn Dam, 10 miles northwest of Loveland. Five persons perished, and damage to roads, automobiles, crops and property exceeded $1,000,000.

At Colorado Springs on the 6th, two men were killed and another severely injured by lightning.

On the 7th, a hail and wind storm extending from near La Junta to the Caddoa area caused losses to property and crops of more than $30,000.

Again on the 17th, lightning killed one man and injured another at Colorado Springs.

A hail storm accompanied by strong winds over the Springfield-Pritchett area caused losses to the extent of $55,000 to farm property and crops.

High winds reaching estimated velocities of 50 m.p.h. damaged transmission lines, trees, small buildings and crops to the extent of $9,000 in the Delta-Austin area of the Gunnison Valley on the 24th.

At Delta on the 29th, lightning struck a farm building, damaging all electrical fixtures and equipment.

A severe hail storm struck the Boulder area at 1:00 p.m. on the 31st, and reached Denver at 1:30 p.m., where transportation was halted temporarily and hail and water accumulated to several feet in depth in the lower areas. Greatest damage was to airplanes, automobiles, roofs, and greenhouses in the north portion of the city. Total losses over the storm area were estimated at over $180,000.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gages.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

CLIMATOLOGICAL DATA

COLORADO

SEPTEMBER 1951
Volume LVI No. 9

Beginning with the October, 1951, issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for the processing and publication of these data.

SAN FRANCISCO: 1951

COLORADO - SEPTEMBER 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Temperatures this September closely followed the seasonal average, and for the State as a whole were only slightly below normal. Precipitation was 50% of the monthly average, and only the Kansas River basin showed an excess. The month was comparatively free of unusual weather, and only two severe storms were reported.

Temperature fluctuations generally were moderate with the exception of a marked deficiency near mid-month and on the 21st, during which period monthly minima occurred at most stations, with light to moderate frost and freezing temperatures. Rains or snows were general over the higher elevations and the eastern plains during the first half of the month, in all sections of the State from the 20th to the 22d, and west of the Continental Divide near the close of the period.

The monthly mean temperature was 57.6°, or 0.8° below the average. The highest monthly mean, 68.5°, was at Palisade 1 S, and the lowest, 43.7°, at Fraser. The monthly maximum of 100° occurred at Las Animas 1 N on the 11th, and the minimum, 6°, at Fraser on the 16th.

Precipitation averaged 0.79 inch, showing a deficiency of 0.60 inch. The greatest monthly amount, 5.49 inches, was recorded at Yuma, and none occurred at the Walsh station. The greatest 24-hour amount, 3.55 inches, was observed at New Raymer.

Conditions generally were favorable for harvesting and farming activities. Crops suffered from lack of moisture, especially in the western and southeastern sections. Soil preparation and seeding of fall grains were general with many fields showing by the close of the month. Cattle and sheep were in good to excellent condition with most herds on winter ranges or feed lots. Picking of a very light peach crop was completed early in the month with the harvesting of a fair pear and apple crop continuing throughout the period.

SEVERE STORMS

On the 4th, a heavy hailstorm occurred near Colorado Springs covering an area of approximately 200 square miles. The hailstones ranged in size from 1/2 inch to 2-3/8 inches in diameter. Crop damage to the extent of $400,000 resulted, and losses to roofs, windows, greenhouses, automobiles and other property exceeded $750,000.

Also on the 4th, a heavy hailstorm occurred in the Byers-Strasburg section, with hailstones ranging in size up to 2-1/2 inches in diameter. Some crops were damaged but the greater losses were to buildings and automobiles.

WMW

ACKNOWLEDGMENTS

In addition to the climatological data from some 6,000 Weather Bureau and cooperative weather stations, this bulletin series contains records from Hydroclimatic Network Stations which were formerly reproduced in the Hydrologic Bulletin Series. The Hydroclimatic Network is a nationwide net of rain gages--mostly of the recording type which produce continuous records of precipitation. It was established in 1939 at the request of the Corps of Engineers, Department of the Army, to supplement existing precipitation stations in order to provide records of rainfall intensity which were essential to the planning of flood control and related works by the Corps of Engineers. This Network, now numbering about 2,000 recording, and 1,000 non-recording rain gages, has been maintained by the Weather Bureau through working funds transferred annually to the Weather Bureau by the Corps of Engineers. These transfers averaged about $250,000 per year between 1940 and 1944, and nearly $375,000 since that date. For the years 1940-42, the Department of Agriculture transferred about $100,000 per year to provide data required in its work, and since 1947 the Bureau of Reclamation has transferred about $25,000 per year to meet the increasing needs of their program in the Western States.

Previous to the introduction of this bulletin series, data from Hydroclimatic Network stations were presented in bulletins (Hydrologic Bulletins) which were issued monthly for each of 8 drainage areas embracing the entire United States, but since the Network was established to meet the internal requirements of the Federal agencies referred to above, no provision was made for public dissemination of the data, distribution being limited to cooperating agencies and to certain public repositories. A list of locations where reference copies of the Hydrologic Bulletin Series are available for inspection may be obtained upon application to Chief,U.S. Weather Bureau,Washington 25, D.C.

Many other records published in this bulletin have been made available through the cooperation of various public offices, private agencies, and individuals as listed in the Station Index.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 4 are from recording gages. Traces are not shown.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 4, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry. When hourly precipitation is missing or accumulated for several days, only the first and last days are shown in Table 4.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
6	Station not equipped with a recording gage.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CLIMATOLOGICAL DATA

COLORADO

OCTOBER 1951
Volume LVI No. 10

Beginning with the October, 1951, issue of Climatological Data, Table 4, Hourly Precipitation, will be discontinued due to curtailment of the funds necessary for the processing and publication of these data.

SAN FRANCISCO: 1951

COLORADO - OCTOBER 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was somewhat cooler and wetter than usual and there was less than the normal sunshine. Day to day temperature fluctuations were moderate and there were no severe or damaging storms.

October opened warm and dry, followed by lower temperatures, with the heaviest precipitation for the month over most of the State from the 3d to the 7th. Clear skies and temperatures above seasonal with very little precipitation prevailed until the 20th when stormy and somewhat cooler conditions were experienced on the 21st and 22d, on which dates the monthly minima were recorded in most areas. After a few warm days, another drop in temperature with general snows occurred on the 26-27th. At the close of the period, temperatures were again considerably below normal over the eastern plains.

The monthly mean temperature, 46.2°, was 1.3° below normal with all sections of the State showing deficiencies. The highest monthly mean, 55.3°, was at Palisade 1 S, and the lowest, 36.4°, at Fraser and Tennessee Pass. The monthly maximum of 92° was recorded at Holly and Las Animas on the 1st, and a minimum of -9° occurred at Fraser on the 22d.

Precipitation averaged 1.34 inches, showing an excess of 0.11 inch for the State as a whole, with slight deficiencies in the Arkansas and Kansas River basins and more pronounced excesses elsewhere. The greatest monthly amount, 3.10 inches, was recorded at Ferndale Ranch, Moffat County, and the least, 0.09 inch, at the Seibert 14 S station. The greatest 24-hour amount, 2.04 inches, was measured at Edgewater on the 5th.

Conditions generally were favorable for harvesting and outdoor activities in general. By the end of the month, most crops were harvested without loss from severe weather conditions. Digging and hauling of sugar beets, picking of corn and late apples continued at the close of the period. Because of the previous dry period, little improvement of winter grains, ranges and pastures was noted. The comparatively mild weather was also beneficial to livestock which continued in good to excellent condition with all herds on winter ranges or feed lots.

WMW

STATIONS NOT FOLLOWED BY A TABLE NUMBER REFERENCE IN THE STATION INDEX ARE NOT PUBLISHED IN CLIMATOLOGICAL DATA BEGINNING WITH OCTOBER 1951, RECORDS.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CLIMATOLOGICAL DATA

COLORADO

NOVEMBER 1951
Volume LVI No. 11

SAN FRANCISCO: 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Considerable variations in temperature, near-normal precipitation and sunshine, and the absence of severe or damaging storms featured November's weather.

The month opened stormy and cold with moderate snows over the eastern and southern portions of the State, and temperature deficiencies from 10° to 25° on the 1st and 2nd; followed by somewhat near-normal temperatures and the heaviest snowfall for the month over the higher elevations and plains area on the 4th and 5th. From the 7th to the 12th, the trend was to fair and warmer. Near midmonth, cooler and unsettled conditions again prevailed with light to moderate snows over the entire State. During the remainder of the month, temperatures fluctuated somewhat with a slight upward trend. Light to moderate and widely scattered snows occurred from the 21st to the 25th.

The monthly mean temperature, 32.1°, was 2.8° below the normal, with all sections showing deficiencies. The highest monthly mean, 42.4°, occurred at Canon City and the lowest, 17.0°, at Taylor Park in Gunnison County. The temperature extremes were: highest, 77° at Two Buttes 1 NW on the 7th and, lowest, -36° at Dillon 1 S on the 17th. The average precipitation, 0.89 inch, exceeded the normal by 0.06 inch, with the Platte and Rio Grande River Drainage basins reporting deficiencies, and the remainder of the State showing excesses. The greatest monthly amount, 7.35 inches, occurred at Wolf Creek Pass 4 W, and the least, 0.04 inch, at Ovid. The greatest amount in any observational day was 1.60 inches on the 14th at the Wolf Creek Pass 4 W station.

Conditions generally were favorable for soil preparation and the harvesting of sugar beets and other late crops. At the close of the month, winter grains were only fair to good as some seed failed to germinate due to lack of moisture. Livestock continued in very good condition with heavy feeding necessary; due to dry, inadequate winter ranges.

WMW

STATIONS NOT FOLLOWED BY A TABLE NUMBER REFERENCE IN THE STATION INDEX ARE NOT PUBLISHED IN CLIMATOLOGICAL DATA BEGINNING WITH OCTOBER,1951, RECORDS.

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received too late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65° F. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D.C.

CLIMATOLOGICAL DATA

COLORADO

DECEMBER 1951
Volume LVI No. 12

SAN FRANCISCO: 1952

COLORADO - DECEMBER 1951

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

For the State as a whole, December was colder and considerably wetter than normal. Distribution of moisture, however, was quite irregular with the Arkansas and Kansas River Basins showing slight deficiencies. Precipitation over the Platte and Rio Grande drainage areas was somewhat above the seasonal, while the Colorado Basin showed an excess of 77%. Heavy snows near the close of the month over the higher elevations along and west of the Continental Divide, that exceeded all-time records at many points, further characterized the month's weather.

From the 1st to the 5th, temperatures were considerably above average, especially over the plains area. In the western portion where light to moderate showers occurred, temperature excesses were less pronounced. During this period, monthly maxima occurred at most stations. From the 6th to the 10th, it was much colder with the deficiencies ranging from 10° to 20°. Near midmonth, general precipitation with another decided drop in temperature prevailed over the entire State. Temperatures near seasonal with very light and scattered snows occurred until the 28th. At the close of the month, heavy snowfall, accompanied by strong winds, occurred over the western slope, resulting in record fall and accumulation at many stations.

The monthly mean temperature, 24.2°, was 1.8° below the normal, with all sections showing deficiencies. The highest monthly mean, 36.2°, occurred at Eversoll Ranch, Baca County, and the lowest, 8.1°, at Sugar Loaf Reservoir, Lake County. The temperature extremes, 79° and -41°, occurred at Eversoll Ranch on the 2nd, and Taylor Park on the 7th, respectively.

The average precipitation, 2.02 inches, exceeded the normal by 1.08 inches. The greatest monthly amount, 16.01 inches, occurred at Wolf Creek Pass 4 W, and traces were reported from seven stations, all in the Arkansas Valley. The greatest amount in any 24-hour period was 4.90 inches at Wolf Creek Pass 4 W on the 30th.

Reports on winter grains were favorable except in the southeast portion where lack of moisture and soil erosion severely damaged many fields. Livestock was in very good condition with heavy feeding necessary in all sections. As a result of heavy snows at the close of the month, some herds were isolated and suffered somewhat from lack of feed and exposure. Heavy snows and strong winds disrupted transportation, and all mountain passes and many highways and roads were closed to traffic.

SEVERE STORMS

Over southeastern Colorado on the 19th, low temperatures, moderate snowfall, and high winds blocked many roads and highways and halted transportation. One person died from freezing near Dove Creek after abandoning his truck that had stuck in a snow drift.

Over western Colorado from the 29th to the 31st, unusually heavy snows, accompanied by high winds resulted in record falls and accumulations at many points. Small buildings collapsed from excess weight of snow; service over power, telephone, and telegraph lines was disrupted. Many roads, highways, and practically all mountain passes were closed to traffic. Avalanches and snow slides marooned trains, trucks, and hundreds of motorists. One truck was swept from the highway on Wolf Creek Pass, causing the death of two occupants. Freezing claimed four lives, two near Rico, one near Silverton, and one at Blue Lake in Jefferson County.

NEW STATIONS										
DE BEQUE	2121	MESA	2	39 20	108 13	4951	6P	6P	JOHN W SAVAGE	2 3 5 6

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CORRECTED DATA

JANUARY through JULY 1951	Blanca, precipitation departure should be as follows: January, -.09; February, -.49; March, -.36; April, -.41; May, -.57; June, -.67; July, -.87.
MARCH 1951	Platoro Dam, max temperature on 28th should be 38 and mean max 34.7. Min temperature on 4th should be 4; 6th, 19; 14th, 10; 29th, -27; 30th, 1 and mean min 3.2. Monthly mean should be 19.0 and lowest min -27 on 29th.
APRIL 1951	Platoro Dam, min temperature on 12th should be 15, mean min 15.3 and monthly mean 29.4.
JUNE 1951	Bonny Dam, precipitation on 2nd should be on 3rd.
	Glendevey Lodge, Delayed Data February 1951, precipitation monthly total should be V3.20.
	Kremmling, add hourly precipitation on 22nd, 4 p.m., .02; 5 p.m., .02 and daily total .04.
	Platoro Dam, min temperature on 3rd should be 26 and mean min 26.7.
SEPTEMBER 1951	Delta, delete precipitation on 30th, should be no precipitation. Monthly total should be .19, departure -.80, greatest day .17 on 29th and days with .01 or more 2.
OCTOBER 1951	Greeley, delete all precipitation and temperature record. See Delayed Data for corrected data.
NOVEMBER 1951	Dillon 1 S, Table 5, min on 7th should be -2 and min on 8th, 12.
	Fraser, Table 5, min on 7th should be -8 and min on 8th, 6.
	Grand Lake 1 N, Table 5, min on 7th should be -2 and min on 8th, 10.
	Wetmore 2 S, Table 5, min on 7th should be -3 and min on 8th, 19.

COLORADO - ANNUAL - 1951

A. W. Cook, Section Director - Denver

WEATHER SUMMARY

The year was slightly cooler than normal with a mean temperature of 44.6°, or 0.7° below the weighted normal. Deficiencies occurred in March, April, June, and September through December, with June showing the greatest minus departure. The remaining months showed plus departures, with the greatest excess in February. Precipitation was above normal in January, May, June, August, and October through December. The total annual amount, 16.39 inches, was 0.20 inch below the weighted normal. The greatest 24-hour precipitation, 7.13 inches, was recorded at Harmon Ranch station in Baca County on May 15. Maximum temperatures of 100° or above occurred during the months of July, August, and September, with an extreme of 107° on July 20 at La Junta. Sub-zero temperatures were observed in January, February, March, November, and December, with an all-time low of -60° on February 1, at the Taylor Park station in Gunnison County. Devastating floods in the foothill region of the north-central portion on August 2 and 3, heavy precipitation and floods over the extreme southeastern section on May 14 and 15, heavy snows December 29 to 31, and the all-time low temperature on February 1, were the outstanding climatic features of the year.

SYNOPSIS BY MONTHS

JANUARY: The month was slightly warmer and wetter than the average January. Distribution of precipitation was quite irregular, with the Arkansas, Colorado, and Platte River Basins showing excesses, and the Rio Grande a noticeable deficiency. Moisture over the Kansas River Basin was normal. Except for an excess of 4° in the Kansas Basin, temperature departures were slight. On the 3rd, fresh to gale force winds prevailed in Denver and vicinity, with peak velocities of 43 miles per hour. Trees were broken and nearby automobiles damaged to the extent of $4,000. One person was injured as a result of the storm. Winter grains were dormant, but suffered severely from blowing snow and soil. Ranges and pastures continued dry and inadequate. Livestock was in very good condition with practically all herds in feed lots. Highways were generally in good condition except near the end of the month when heavy snows slowed transportation temporarily and blocked Monarch and Red Mountain highway passes.

FEBRUARY: Precipitation was considerably below seasonal in all but the Kansas River drainage area, while temperatures exceeded the normal by 2°. The outstanding feature of the month was a decided drop in temperature on the 1st when all stations recorded sub-zero readings, and the all-time low of -60° occurred at the Taylor Park station. Moderate snow slides and avalanches were common during the first decade at several of the mountain passes, delaying traffic and causing some damage to transmission lines and highways. Conditions were favorable for soil preparation at the lower levels. Winter grains continued to suffer from lack of moisture and soil erosion, and the crop outlook was only fair. Livestock wintered well and calving and lambing was well advanced with promising increases.

MARCH: March was moderately below normal in both temperature and precipitation, with the greatest temperature deficiency in the Kansas and Platte River Basins. The Platte drainage received the greatest amount of moisture, or 73% of the normal, while the Kansas Basin was the driest with only 18% of the 64-year average. Conditions were unfavorable for winter grains, soil preparation, and farming activities in general, but planting of spring grains, sugar beets, and other row crops was well under way at the close of the month. Livestock wintered well with calving, lambing and sheep shearing general in most sections.

APRIL: Temperatures showed a marked deficiency, averaging 2° below seasonal. Minima dropped to below freezing throughout the month in most sections, causing heavy damage to fruits and vegetables, especially in the Colorado and Rio Grande River Valleys. April was the third consecutive month with a precipitation deficiency, which averaged 0.25 inch below the normal. Sub-normal temperature, inadequate sunshine, and insects were detrimental to winter grains. Planting of spring grains, sugar beets, and garden truck was general, but germination was slow. Livestock was in good condition with some movement to summer ranges.

MAY: The sub-normal trend of the previous two months continued into the first of May, but a turn to warmer and more moist conditions resulted in slight excesses of both temperature and precipitation. The general increase in moisture and higher temperatures was beneficial to most crops, and most of the previous retardation had been overcome at the close of the month. Some sections of the eastern counties experienced hail damage on the 14, 15, 20, 21, and 29th, with an estimated damage of $750,000. Over southeastern Colorado on the 14th and 15th, heavy rains of from four to seven inches, with locally severe hail and high winds, caused crop and property losses of some $300,000. Even greater damage was caused by floods, particularly in the town of Holly, which was inundated with several feet of water when Wild Horse Creek overflowed its banks. There was one death by drowning. Heavy rains, high winds, and several small tornadoes in northwestern Sedgwick County on the 20th, flooded basements and damaged fields and roads. A hailstorm of moderate to heavy intensity on the 29th caused losses to crops and property to the extent of $135,000 in Kit Carson, Cheyenne, and Lincoln Counties.

JUNE: The month was comparatively cool, and somewhat wetter than normal. All sections showed sub-normal temperature, while precipitation was deficient in the Colorado and Rio Grande River Basins, but considerably above normal elsewhere. On the 6th near Karval, a tornado, accompanied by hail, damaged property and crops to the extent of $9,500. In southwestern Crowley and northern Otero Counties on the 14th, a severe hailstorm and floods caused losses to the extent of one million dollars to crops and property. On the 18th, in the Cheraw Sugar City area, a tornado and severe hailstorm damaged crops and buildings. Several hailstorms on the 21st in southwestern Yuma County caused severe crop loss and killed many wild and domestic fowl and small animals. In Sedgwick County on the 25th, a tornado caused $35,000 damage, and a hailstorm resulted in losses of $77,000 to crops, livestock, and poultry. Conditions were only fair for farming activities. Low temperatures and cloudy skies retarded plant growth in wetter sections, while vegetation suffered severely from near-drouth conditions in the drier areas.

JULY: Normal temperatures and moderate precipitation deficiency featured the month's weather. A hail and rainstorm in southeastern Weld County on the 16th, hail near Bovina on the 20th, heavy rain and hail on the 21st near Carbondale, hail and wind in western Kit Carson County, resulted in losses totaling $200,000. Lightning on the 20th injured a man and his son at Paonia, and killed one man near Walden on the 27th. The crop outlook improved with the month, but continued sub-normal due to previous adverse weather. Combining and threshing of winter grains got under way and spring grains were ripening; row crops made satisfactory progress, especially in the irrigated areas, but the sugar beet crop was the most outstanding.

AUGUST: Precipitation exceeded the normal by 25%, with only the Kansas River Basin showing a deficiency. Temperatures were near seasonal. One of the severest rainstorms in the Denver metropolitan area occurred on the 2nd and 3rd. Local streams overflowed and flooded adjoining areas. Transportation was halted temporarily, hundreds of motorists and persons were stranded, losses to property and crops exceeded $500,000. On the 3rd, a downpour at Ouray caused $30,000 damage to lawns, trees, buildings, and roads. A devastating flood occurred in the foothill region of north-central Colorado on the night of the 3rd, as a result of storms on the 2nd and 3rd. The storm of the 2nd had a duration of about 19 hours, with rain falling almost constantly from 6:00 p.m. to 8:00 a.m. of the 3rd. Commencing again at 5:00 p.m. of the 3rd, rain fell intermittently until 8:00 a.m. of the 4th, with "cloudburst" proportions being reached on the night of the 3rd. Because of the intense precipitation and soil moisture conditions, runoff reached damaging flood proportions. The center of the greatest rainfall reported in the storm area was approximately 10 miles west of Fort Collins, where a total of 12 inches was reported for the two-day period. This storm center approximately paralled the range of foothills west of Horse Tooth Reservoir. Another storm center of lesser magnitude occurred near the headwaters of Dry Creek, a tributary of St. Vrain Lake. The maximum depth of rainfall reported for this storm was about seven inches. A third storm center area occurred in the headwaters of Cottonwood Creek, where maximum depth of rainfall for this storm was about nine inches. No severe damage occurred in the Boulder Creek drainage except for flooded basements in the city of Boulder. In the St. Vrain Creek basin, the heaviest concentration of the storm and runoff was evidently in the upper reaches of the Dry Creek watershed, which filled Beasley Reservoir to capacity and caused severe damages downstream. The railroad crossings over Dry Creek and five highway bridges were destroyed, and one house in this area was washed away. In the Big Thompson basin, flood waters caused loss of life to four people and considerable property damage. The larger damages and casualties resulted from floods on Big Horn Creek which

(Continued on following page.)

were intensified by the failure of the Big Horn Reservoir. Everything in the path of the flood waters for a distance of three miles below the dam were practically totally destroyed. Farm lands were overflowed to a point ten miles below Loveland. A maximum rainfall of approximately 12 inches was reported on Redstone Creek,five miles above Masonville. Precipitation on the Cache La Poudre River basin followed the pattern of the storm. Flood water emerged from Rist and Long Canyons, causing damages at Bellvue, where houses were flooded and washed downstream. Three lives were lost in this area. Damage in Fort Collins and the adjoining farm lands resulted from flooding and silting. Low lands were inundated and property losses were severe. (More detailed survey by U.S. Bureau of Reclamation on file at Weather Bureau Office,Washington, D.C.) At Colorado Springs, lightning killed two men on the 6th, and one on the 17th. Hail and wind on the 17th in the La Junta--Caddoa area caused property and crop losses to the extent of $30,000. In the Springfield--Pritchett area on the 20th, hail and wind resulted in $55,000 damage, mostly to crops. On the 31st over an area extending from Boulder to Denver, a severe hail storm caused $180,000 damage to airplanes, automobiles, roofs, grain, houses, and crops. An accumulation of hail and water in the lower elevations temporarily halted transportation. Conditions in general were favorable for farming activities, and the crop outlook was the most promising of the season.

SEPTEMBER: Temperatures this month closely followed the seasonal average,and for the State as a whole, were slightly below normal. Precipitation was only 57% of the average and only the Kansas River Basin showed an excess. On the 4th, a heavy hailstorm occurred near Colorado Springs, resulting in damage to crops, automobiles, grain, houses, and other property, to the extent of $400,000. Another heavy hailstorm occurred in the Byers--Strasburg area. Some crops were damaged, but the greater loss was to buildings and automobiles. Crops suffered from lack of moisture, especially in the Arkansas River Valley. Soil preparation and seeding of fall grains was general. Picking of a light peach crop was completed early in the month, with the harvesting of a fair pear and apple crop continuing throughout the period.

OCTOBER: The month was cooler and wetter than usual, and there was less than the normal sunshine. Day to day temperature fluctuations were moderate and there were no severe or damaging storms. Conditions were favorable for harvesting and other outdoor activities. By the end of the period, most crops were harvested without loss from severe weather conditions. Digging and hauling of sugar beets, and picking of corn and late apples continued. Because of the previous dry period, little improvement of winter grains, ranges, and pastures was noted. Livestock was in very good to excellent condition.

NOVEMBER: Considerable variations in temperature, near normal precipitation, and sunshine, and the absence of severe and damaging storms featured November weather. Soil preparation and the harvesting of sugar beets and other late crops continued. At the close of the month, winter grains were only fair to good as some seed failed to germinate due to lack of moisture. Livestock, mostly in feed lots, remained in very good condition.

DECEMBER: Colder and considerably wetter conditions, with record snow over the higher elevations along and west of the Continental Divide near the close of the period. featured the month's weather. The average precipitation, 2.02 inches, exceeded the normal by over 100%. Over the southwestern section on the 19th, low temperatures, record snowfall, and high winds blocked many roads and halted transportation. One person died during the storm from freezing near Dove Creek. From the 29th to the 31st, west of the Continental Divide, unusually heavy snows resulted in record fall and accumulation at many points. Small buildings collapsed from excess weight of snow, and service over transmission lines was disrupted. Many roads, highways, and practically all passes were closed to traffic. Avalanches and snow slides marooned trains and trucks, and hundreds of motorists. One truck was swept from the highway on Wolf Creek Pass, causing the death of two occupants. Freezing claimed four lives, two near Rico, one near Silverton, and one at Blue Lake in Jefferson County. Reports on winter grains were favorable except in the southeast portion where lack of moisture and soil erosion prevailed. Livestock generally continued in very good condition except for some herds which were isolated by deep snow and suffered from exposure and lack of feed.

Ø Reactivated as Storage Gage Station. # Reactivated.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

REFERENCE NOTES

Unless otherwise indicated, dimensional units used in this bulletin are: Temperature in °F; precipitation and evaporation in inches, and wind movement in miles. Evaporation is measured in the standard Weather Bureau type pan of 4 foot diameter unless otherwise shown by footnote following Table 4.

The four digit identification numbers in the Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Delayed data and corrections will be carried in the June and December issues of Climatological Data.

-	No record.
+	Also later date (dates) or months.
*	Amount included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
B	Adjusted to full month.
E	Water equivalent of snowfall wholly or partially estimated, using a ratio of 1 inch of water equivalent to every 10 inches of new snowfall.
M	1 to 9 days' record missing; see monthly Climatological Data for detailed daily record.
R	Station equipped with a recording gage only.
T	Trace, an amount too small to measure.
V	Includes total for previous months. V in annual column means total is for a two-year period.
S	Storage precipitation station. Will be published in the June, July and August or delayed data December issue of Climatological Data.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to Superintendent of Documents, Government Printing Office, Washington 25, D. C

CLIMATOLOGICAL DATA

COLORADO

JANUARY 1952
Volume LVII No. 1

SAN FRANCISCO: 1952

COLORADO - JANUARY 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

The month was warmer and wetter than the average January. All sections except the Colorado River basin showed temperature excesses. Precipitation exceeded the normal in the Colorado and Rio Grande drainage areas. Moderate deficiencies occurred elsewhere.

Sub-normal temperatures prevailed over the eastern slope from the 1st to the 3rd, and west of the Continental Divide until the 11th. Except for a short period at the beginning of the third decade, temperatures considerably above seasonal prevailed for the remainder of the month. No unusual or damaging storms occurred, and precipitation was well distributed throughout the month. The monthly mean temperature, 25.5°, was 2.2° above normal. The highest monthly mean, 39.4°, occurred at Canon City, and the lowest, 6.1°, at the Cochetopa Creek station in Gunnison County. The temperature extremes were: highest, 76° at Eversoll Ranch, Baca County, on the 25th, and lowest, -43°, at Walden on the 3rd. The average precipitation, 1.11 inches, exceeded the normal by 0.18 inch. The greatest monthly amount, 11.21 inches, occurred at Wolf Creek Pass 4 W, and five stations were entirely without moisture. The greatest precipitation in any observational day was 2.10 inches at Wolf Creek Pass 4 W on the 7th.

Winter grains were dormant, but suffered somewhat from soil erosion in many of the southwestern counties. Ranges and pastures continued dry or snow covered. Livestock wintered well with only isolated cases of shrinkage and losses due to late December heavy snows.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CLIMATOLOGICAL DATA

COLORADO

FEBRUARY 1952
Volume LVII No. 2

SAN FRANCISCO: 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

February was slightly colder and considerably drier than usual. Except for somewhat abnormal winds which caused drifting snow throughout the State and soil erosion over the southwest, no severe or damaging storms occurred during the month.

The comparatively warm period of the latter part of January continued throughout the first decade with the greater excesses over the eastern plains. Light scattered snows were general over most of this section from the 2nd through the 5th. Lower and near seasonal temperatures, with moderate fluctuations from day to day, and light precipitation characterized the weather from the 12th through the close of the month. From the 22nd to the 25th, deficiencies were more pronounced and the lowest temperatures of the month occurred during this period at most stations. During the warm spell on the 26th and 27th, the monthly maxima were recorded at most stations in the eastern portion.

The monthly mean temperature, 26.7°, was 0.6° below normal. The monthly maximum, 74°, occurred at Las Animas 1 N on the 27th, and the minimum, -40°, at Fraser on the 25th. Precipitation was only 59% of the normal, with a weighted average, 0.60 inch. All sections except the Kansas River basin showed a deficiency. Wolf Creek Pass 4 W reported 4.20 inches, the greatest monthly amount, while a trace was recorded at five stations. The greatest amount recorded in any 24-hour period was 1.25 inches at Wolf Creek Pass 4 W on the 21st.

Winter grains, dormant most of the month, suffered from dryness and blowing soil, especially in the Arkansas River Valley. Pastures and ranges remained dry or snow covered. Livestock wintered well and calving and lambing were well under way at the close of the month with good increases. Highways and roads, although slippery at higher elevations were generally in good condition. The storage and irrigation water outlook continued very good as a result of unusually heavy snows during the previous months.

‡ 1 ARKANSAS, 2 COLORADO, 3 KANSAS, 4 PLATTE, 5 RIO GRANDE.

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

MARCH 1952
Volume LVII No. 3

SAN FRANCISCO: 1952

COLORADO - MARCH 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

March was cold, windy, and wet. Precipitation averaged slightly above normal and was well distributed throughout the month, with the Rio Grande River basin showing the greatest deficiency, and the Kansas and Platte drainage areas moderate excesses. Moisture over the remainder of the State was seasonal. Temperature deficiencies occurred in all sections with an average minus departure of near 5°. The month was the 7th coldest for the entire period of observations. Fresh to gale force winds were not uncommon along and east of the Continental Divide.

The month opened cool, cloudy, and unsettled, with marked temperature deficiencies and general rains and snows over the entire State until the 6th. Following the 6th for a period of five days, clear to partly cloudy skies with temperatures above normal prevailed. From the 11th to the 19th, temperatures fluctuated somewhat, and light, widely scattered, rain and snow showers were common, while fresh to gale force winds prevailed east of the Continental Divide early in the period. The third decade produced the greatest portion of the month's precipitation and the most pronounced temperature deficiencies, with the monthly minima at many stations occurring on the 22nd and 23rd. Winds again reached noticeably high velocities on the 21st and 22nd. Temperatures rose near the close of the month with some widely scattered precipitation.

The monthly mean temperature, 29.7°, was 4.7° below normal. The monthly maximum, 79°, occurred at Holly on the 29th, and the state minimum of -32° at Taylor Park, Gunnison County, on the 4th. Precipitation was slightly above normal with a weighted average of 1.38 inches. Wolf Creek Pass 4 W reported 9.44 inches, the greatest monthly amount at any station, while only 0.03 inch, the least, occurred at the San Luis Lakes 3 W station. The greatest 24-hour amount, 2.55 inches, was measured at Wolf Creek Pass 4 W on the 11th.

Sub-normal temperatures and heavy snow cover retarded agricultural activities, especially in the higher elevations. The increased precipitation benefitted winter grains, ranges, and pastures, but considerably more moisture was needed in all of the southern counties. By the close of the month, soil preparation, planting of spring grains, row crops, and garden truck was under way with some fields showing. Ranges and pastures improved somewhat but were still only in fair to good condition. Livestock continued in good to excellent condition, with most herds still in feed lots. Calving and lambing were well advanced with good increases and very limited losses due to severe weather conditions. Sheep shearing got under way in most sections.

SEVERE STORMS

On the 12th, west to northwest winds of fresh to gale force prevailed over a 200-mile strip east of the Continental Divide, accompanied by severe soil movement in the southern portion. Light to moderate damage occurred to telephone and transmission lines, trees, and small buildings in the northern section, with more severe losses to plate glass windows, buildings, and automobiles in the metropolitan areas of Colorado Springs and Pueblo. Crop damage from soil erosion was limited to the southern half of the storm area where visibility was at some points reduced to near zero by blowing dust. Some damage to windmills and other farm buildings occurred in eastern counties.

On the 21st and 22nd, heavy snowfall and strong winds prevailed east and along the Continental Divide extending from the Wyoming to the New Mexico borders. Drifting snows and icy road conditions slowed automobile transportation and resulted in many minor accidents. Many rural and some city schools were closed. Some spring calf and lamb losses resulted from exposure. Two deaths occurred as a result of the storm, one from exposure in north Denver, and another in a skidding automobile near Castle Rock.

WMW

REFERENCE NOTES

The four digit identification numbers in the index number column of the Station Index are assigned on a state basis. There will be no duplication of numbers within a state.

Figures and letters following the station name, such as 12 SSW, indicate distance in miles and direction from the post office.

Observation times given in the Station Index are in local standard time.

Delayed data and corrections will be carried only in the June and December issues of this bulletin.

Monthly and seasonal snowfall and heating degree days for the preceding 12 months will be carried in the June issue of this bulletin.

Stations appearing in the Index, but for which data are not listed in the tables, are either missing or received to late to be included in this issue.

Unless otherwise indicated, dimensional units used in this bulletin are: Temperatures in °F., precipitation and evaporation in inches, and wind movement in miles. Degree days are based on a daily average of 65°F. Evaporation is measured in the standard Weather Bureau type pan of 4 feet diameter unless otherwise shown by footnote following Table 6.

Sleet and hail were included in snowfall averages in Table 1, beginning January 1949.

Amounts in Table 3 are from non-recording gage, unless otherwise indicated.

Data in Tables 3, 5, 6 and snowfall in Table 7 (when published) are for the 24 hours ending at time of observation. See the Station Index for observation time.

Snow on ground in Table 7 is at observation time for all except Weather Bureau and CAA Stations. For these stations snow on ground values are at 5:30 p.m., MST.

-	No record in Table 3, 6, 7 and the Station Index. No record in Tables 2 and 5, is indicated by no entry.
+	And also on a later date or dates.
*	Amounts included in following measurement, time distribution unknown.
//	Gage is equipped with a windshield.
AR	This entry in time of observation column in Station Index means after rain.
B	Adjusted to a full month.
E	Water equivalent of snowfall wholly or partly estimated, using a ratio of 1 inch water equivalent to every 10 inches of new snowfall.
M	One or more days of record missing; see Table 5 for detailed daily record. Degree Day data, if carried for this station have been adjusted to represent the values for the full month.
R	Daily values and monthly total from recording gage. All other data in Table 3 are from non-recording gage.
S	Storage precipitation station. Precipitation measurement, made at irregular intervals, will be published in the June, July and August or delayed data December issue of this publication.
SS	This entry in time of observation column in Station Index means sunset.
T	Trace, an amount too small to measure.
V	Includes total for previous month.
VAR	This entry in time of observation column in Station Index means variable.

Subscription Price: 15 cents per copy, monthly and annual; $1.50 per year. (Yearly subscription includes the Annual Summary.) Checks and money orders should be made payable to the Treasurer of the United States. Remittances and correspondence regarding subscriptions should be sent to the Superintendent of Documents, Government Printing Office, Washington 25, D. C.

COLORADO

APRIL 1952
Volume LVII No. 4

SAN FRANCISCO: 1952

COLORADO - APRIL 1952

A. W. Cook, Section Director, Denver

WEATHER SUMMARY

Seasonal weather prevailed throughout April with normal precipitation and temperatures only slightly above. Some fresh to strong winds, causing limited soil movement over the eastern plains was the only unusual feature of the month.

Clear to partly cloudy skies predominated until the 8th, with limited and widely scattered showers over the northeast portion, and the most pronounced temperature excesses of the month near the close of the period. Somewhat subnormal temperatures and generally well-distributed precipitation prevailed from the 9th until mid-month. Temperature fluctuations were moderate for the remainder of the month with heavy precipitation east of the Continental Divide and light scattered showers elsewhere at the close of the second decade. Near the end of the month, precipitation was again general over most of the State with the greater amounts recorded in the southwest portion.

The monthly mean temperature, 44.6°, was 0.7° above normal, with all sections showing slight excesses. The monthly maximum, 90°, occurred at Eversoll Ranch, Baca County, on the 7th, and the State minimum, -21°, at Taylor Park, Gunnison County, on the 1st. Precipitation was normal with a weighted average of 1.73 inches. The Colorado River basin showed a deficiency, while elsewhere slight excesses prevailed. The Lake Moraine station, El Paso County, recorded the greatest monthly amount, 5.34 inches, and Walden the least with only 0.05 inch. The greatest 24-hour amount, 2.75 inches, was recorded at Wetmore 8 SW, on the 21st.

The month was generally favorable for agricultural activities; soil preparation and planting progressed at a normal rate. At the close of the period, soils were in good shape and planting well under way. The heavy winter snow cover had delayed activities in the higher elevations of the western slope. Winter wheat and barley made satisfactory progress and the crop outlook was excellent in the Platte and Kansas River Valleys, good over the western slope, and fair to good elsewhere. Planting of spring grains and early row crops was general with average showing as the month progressed. Ranges and pastures improved somewhat but were in only fair condition. Livestock wintered well, calving and lambing were well advanced with good increases and very light losses due to adverse weather conditions. Some herds were moving to summer ranges. The fruit crop outlook was good with buds in various stages from the late pears and apples showing color to peaches, cherries, and plums and other early fruit in full bloom. Reports on irrigation and storage water indicated abundant supply, and subsoil moisture improved, especially in the Arkansas River Valley.

SEVERE STORMS

On the 3rd near Haswell, soil laden winds, reaching gale velocities at times, prevailed over an area of 1300 square miles for a period of 10 hours. The resulting damage was limited to winter grains and newly plowed farm land.

WMW
